

WHAT IS CLAIMED IS:

1. A multi-functional bell comprising a lower semi-round bell and an upper semi-round bell which are combined to be formed with a bell; a sound source being placed in the bell; colors of the upper semi-round bell and lower semi-round bell being changeable; a space being formed between the upper semi-round bell and lower semi-round bell for receiving gifts so that the bell being as a packaging box.

2. The multi-functional bell as claimed in claim 1, wherein an edge of a bottom of the lower semi-round bell coupling to the upper semi-round bell is installed with a plurality of rotatable buckling sheets which are vertically protruded from the edge; an edge of the upper semi-round bell coupling to the lower semi-round bell is formed with an annular resisting edge for resisting against the rotatable buckling sheets; a plurality of buckle sheets are protruded from the resisting edge; the buckle sheets are alternatively arranged with the rotatable buckling sheets so that the upper semi-round bell is able to be coupled to the lower semi-round bell by engaging the buckle sheets and the rotatable buckling sheets.

3. The multi-functional bell as claimed in claim 2, wherein a U like shape hook portion is formed at a lower end of each buckle sheet; when the lower semi-round bell and the upper semi-round bell are coupled, by rotating one of the upper semi-round bell and the lower semi-round bell, the buckle sheets are received in the hook portions so that the lower semi-round bell is positioned in the upper semi-round bell.

4. The multi-functional bell as claimed in claim 2, wherein the LED lamp is placed in the bell space so that the bell is used as a decoration to be suspended in a Christmas tree.
